

AGI

AGI

AGI is a leading manufacturer of above-ground storage tanks. We design, build and install environmentally safe tanks for use in every major industry - oil and gas, mining, transportation, construction, waste management, bulk and retail storage and service, and more.

AGI is committed to giving our customers affordable solutions to all their containment needs. If there's a better way to design a tank or delivery system to fit your requirements ... we'll find it.

the BETTER WAY

INDUSTRY LEADING CUSTOM MANUFACTURING

Custom Manufacturing

AGI manufactures a complete range of tank sizes and designs, and we supply all necessary components, including pumps, dispensers, bollards, spill containers, and electrical accessories. All our products are built to API, ULC or UL standards. And because every industry - and every customer - has their own needs, AGI customizes our product to suit your application. Whatever features you need built into your tanks or tank sites, we have the design and engineering experience to do it.

Complete Customer Service

At AGI, our service philosophy is simple: give the customer all the support they need. Our personnel have experience in site planning, evaluation and configuration, the environmental approval process, system design, site preparation (including clean-up of old UST and AST sites), decommissioning, installation and operational start-up.

Responsive service is part of every AGI package. We not only customize our products, we customize our service to meet your needs.

We offer the option of **long-term site development**. Through site evaluation and customer consultations, we identify immediate component needs, as well as future expansion requirements. This gives customers a cost-effective option to full site installation.

We offer **experienced consulting** at the site development stage, including site evaluation and configuration, to help design and plan systems that meet specific industry and customer needs.

Complete, responsive service is all part of our ongoing commitment to ensuring customers' systems, once installed, incorporate the **latest technology** and function safely and cost-effectively over the long-term.

While your custom tanks are being manufactured, AGI can supply you with rental tanks, complete with dispensers, to meet your immediate storage needs and ensure uninterrupted service for your customers - all at a reasonable cost.

AGI's Internal Sales Co-ordinator and Design Engineer consult on plans for another custom manufactured liquid containment system.

Long, flat sheets of steel are rolled and tack welded into individual tank sections.

Several rolled sections are seam-welded to make the tank body.

After the main tank has been inserted into the secondary containment, the ends are welded and ground to a smooth finish.

Skids are welded onto a horizontal Envirotank in preparation for sandblasting and painting.

AGI maintains its own in-house parts department to ensure the manufacturing process can proceed smoothly.

AGI's manufacturing site in Biggar includes separate facilities for horizontal and vertical manufacturing. The vertical facility shown was constructed in 1997 to meet increasing demands.

INNOVATIVE DESIGN AND CONSTRUCTION

Designed for Industry

Containment is a growing concern in all industries today. Safety, reliability, efficiency, cost-effectiveness - all are part of the equation when you are looking for containment systems. Envirotanks from AGI are an effective, affordable solution to containment across the industrial sector.

AGI tanks are built for durability in the field. They are low maintenance, and easy to monitor and access. The unique design allows for easy installation and relocation - something not possible with USTs. And Envirotanks are versatile - if you need containment for a corrosive, flammable, oxidizing, reactive or otherwise hazardous agent, AGI will custom manufacture a tank to store it.

Applications in the Field

AGI puts our tanks to work in the field in a variety of ways - as single storage tanks, containment systems, special storage sites, retail service stations (including stand alone remote sites) and bulk fuel centres. Our first-hand experience gives us a working knowledge of the special requirements of specific industries.

Teamwork

The sales and production team at AGI is one of the best in the business. We have experienced personnel in our Saskatchewan head office and manufacturing facility, and in regional sales offices across Canada.

AGI tanks are custom manufactured for durability, cost-effectiveness and a variety of applications.

AGI's sales representatives offer one-on-one customer service and on-site consultations. They have experience in agriculture, oil and gas, and manufacturing industries, and are committed to ensuring AGI storage sites meet the special needs of your industry.

AGI continues to enhance our client base by expanding our sales reach into the United States, and international markets.

In order to provide complete customer service, AGI supplies many of the components and accessories used in conjunction with our tank products. Through our comprehensive parts' inventory, our knowledgeable staff can fit the right component to the right site.

Our Production department is managed and staffed by experienced people with backgrounds in manufacturing and steel fabrication. Their expertise in the design, manufacture and installation of environmental tanks enhances our ability to adapt products to the specific needs of individual customers.

By continually updating our Quality Assurance and Control Program (QACP), our experienced Quality Control Officer ensures that all AGI products provide safe, reliable, year-round containment for every customer application.

ENVIRONMENTALLY SAFE CONTAINMENT

envirotank

the
BETTER
WAY

AGI backs all our products with complete customer support services site evaluation and configuration, site decommissioning, and site installation and operational start-up by our experienced crew. We will also work with your planning and installation contractors to deliver the most efficient system for your needs.

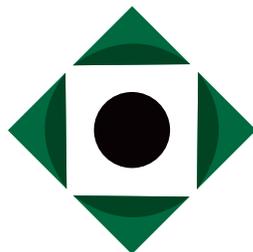

This means we not only customize our tanks, we customize our service to meet your specific needs, from experienced consulting at the site development stage, to decommissioning of old underground tank sites.

High quality standard and optional features, product customization, and customer support services combine to make AGI Envirotanks one of the most reliable and cost-effective means of retail fuel storage available.

AGI's custom manufacturing, complete customer service and versatile applications combine to make our tanks among the most cost-effective, efficient means of containment available.
